

# *Eco-problems in our hometown*

People- Zarubina Masha, Pyatkova Liza  
Teacher- Ryabova Olga Nikolaevna

- We'd like to present the project «Eco- problems in our hometown»

- Syktyvkar has eco-problems. First, the main is the pollution of river.

- The second problem is the problem of air pollution.

- People cut down forests and kill animals. Unprocessed waste pollutes wildlife. People spend natural resources.

An aerial photograph of a river meandering through a vast, dense forest. The river is dark blue and winds through the green landscape, creating several islands and peninsulas. The forest is a mix of evergreen and deciduous trees, with some open grassy areas visible in the distance. A semi-transparent pink rectangular box is overlaid on the middle of the image, containing text.

*These problems are not only in our city,  
it is necessary to observe the rules.*

- First, people need to save natural resources, cut down forests and protect animals. People need to build factories far from cities.

**If you follow these rules, then our city will be cleaner and better.**

***In conclusion, we want to say that, you should take care of our city!***

Thank you for your attention!
